

# Paydia Kiosk®

## ALL-IN-ONE

Food, Entertainment, Retail,  
On-line Sales, & Business System

Enable your guests to engage with promotions, purchase play cards or wristbands, regulate account balances, schedule activities and more, all while tracking your business' performance.

Our software allows you to custom manage and track your guests' experiences throughout all aspects of your venue in all industries.

### Software

CORE's software can work within a venue in a combination of industries simultaneously, including; food, entertainment, retail and on-line sales.

Our software works as a stand-alone system, integrates into your existing system or can be used as a complete business platform.

### Total Business Solution

Work with our developers to customize your guests' purchasing process and your business workflow procedures.

Customized business reports are developed for your venue to give insight into operations analytics making it easier to make informed business decisions.

### Hardware

Paydia Kiosks are manufactured and assembled in the United States with durable metal, which means they are built to last, giving you reduced RMA exposure.

Our manufacturing facility can select specific hardware and finishings that will withstand extreme external weather conditions and demanding environments.

An angled touchscreen allows for a comfortable sharp, glare free view.

With our on-site manufacturing facility, you can add multiple hardware features to your kiosks, allowing customization that matches your business procedures.

### Security

EMV card readers ensure cardholder data is safely processed and transmitted.

All business risk of charge-back is virtually eliminated because there is no sensitive credit card information sent to or stored on the point-of-sale application.

Our secure metal cash box is encapsulated which prevents theft and tampering.

**Reduce credit card  
Chargebacks**

Save thousands on hidden fees

no barcode  
fees
